NOTES

1. If parallel circuits of different sizes are contained in one conduit, the size of the grounding conductor shall be determined on the basis of the largest conductor. Only one grounding conductor is required for each conduit regardless of the number of circuits contained.
2. Service ground per serving utility requirement. If the utility uses aluminum service conductors, an approved Al-Cu pressure type ground connector shall be used to secure the service neutral to the copper neutral bar in the service enclosure. Except for the above, all grounding conductors shall be copper.
3. Equipment grounding connectors and grounding electrode conductors shall be sized in accordance with the National Electric Code (No. 8 minimum).

Required to supplement equipment grounding for luminaire standards with direct burial, aerial feeds or where required in plans.

Required at all services and separately derived systems.
